

MOTOKOPAČICA MOTO-TILLER IMT 511

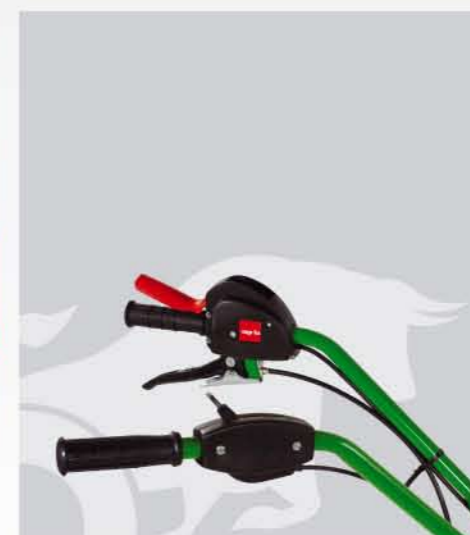

agria
MotorGartenGeräte

Motokopačica IMT 511 namenjena je za usitnjavanje zemlje u povrtarstvu. Za pogon koristiti jednocilindrične, četvorotaktne eco benzin motore. Opremljena je bezkontaktnim elektronskim sistemom za paljenje. Transmisija je opremljena pužnim prenosom sa kugličnim kvačilom. Raspolaže sa jednom brzinom za kretanje napred. Ručice motokopačice su podesive po visini i pomerljive u stranu što korisniku omogućuje da ne hoda po obradenoj zemlji.

Moto-tiller is machine intended for truck-farming. A single cylinder with fourcycle eco engine is used as a drive force. The engine is equipped with uncontacting electro system for starting. Inside the drive transmission a ball clutch have been incorporated. Drive transmission itself consists of worm gear and one forward speed. The steering hands are adjustable on hight and turnable to side in order that an operator walks alongside the cultivated soil.

MOTOKOPAČICA FARMHANDY IMT 510 GX

agria
MotorGartenGeräte

Motokopačica je namenjena za obradu zemlje u cvećnjacima, staklenicima i plastenicima gde se zahteva velika preciznost u odnosu na biljku. Moguće je održavanje zelenih površina grebačem mahovine i fertikuterom za prosecanje. Za pogon koristi jednocilindrični četvorotaktni eco benzin motor. Zbog svojih malih dimenzija lako se smešta u prtljažnik automobila a zbog male težine lako se prenosi do mesta rada.

When having a need for cultivating the soil with great precision in consideration with the plant itself, use this small tiller that is exactly dedicated for soil cultivation near the flowers, roses, wires, fences or in green-houses or house-yards. It is very easy to put the machine into a luggage compartment of an automobile because of machine's dimension and weight and it is so easy to transport it to a working place.

Machine is equipped with different rotor-tiller possibility within the range of 10, 16, 22, 28, 34 and 40cm.

MOTOKULTIVATORI IMT 410 i 414 DIZEL su savremene, kvalitetne i univerzalne poljoprivredne mašine. Opremljene su diferencijalom što omogućava veliku sigurnost u vožnji i lakše rukovanje u radu. Agregatiranje priključnih oruđa je veoma jednostavno, lako i brzo. Mogu se efikasno koristiti za radove u komunalnoj delatnosti.

MOTOCULTIVATORS IMT 410 and 414 DIESEL are modern, quality and universal agricultural machines. They are equipped with "defferential" what enables great safety in driving and easier manipulation in work. Joining the attaching implements is very easy and fast thing to do. Both machines can be used effectively in municipal works.

ROTACIONA KOSAČICA ROTARY MOWER IMT 805.136

Samohodna rotaciona kosačica IMT 805.136 namenjena je košenju većih travnatih površina: parkova, sportskih terena, fabričkih, hotelskih i turističkih zelenih površina. Pogon na zadnje točkove ostvaruje se zupčastim, kaišnim i pužnim prenosom u kombinaciji sa kandžastim spojnicama. Pogonski točkovi su od gume što pojednostavljuje održavanje. Pogon noža je pomoću kaiša koji se pri zaustavljanju koči kočnicom. Rezni nož je od kvalitetnog materijala koji uz originalno rešenje i termičku obradu obezbeđuje čist rez i kvalitetno košenje. Rad sa komandama je lak i jednostavan. Podešavanje visine košenja vrši se pojedinačno na sva četiri točka u pet položaja od 35 do 100 mm.

Self-propelled rotary mowing machine IMT 805.136 is intended for grass mowing (parks, sports grounds, factories, hotels and tourist green areas). The back wheels drive is achieved by toothed, belted and snail transmission in combination with the slaw coupling. The drive wheels are of solid rubber which simplifies the maintenance. The knife drive is by belt, which is being stopped by breaking. The cutting knife is made from good quality material, which due to its both original solution and termical treatment provides a fine cut and good quality cutting. The operation with the commands enables both simply and easy handling. The height of mowing is being adjusted separately to all four wheels in five positions from 35 to 100 mm.

SAMOHODNA MOTOKOSAČICA SELFPROPELLED MOTO-MOWER IMT 407

Osnovna namena samohodne motokosačice IMT-407 LS je košenje krmnog bilja, lekovitog bilja i žitarica. Naročito je pogodna za korišćenje na brdsko planinskim terenima, gde nije moguć rad traktorske mehanizacije. Košenje na nagnutim terenima pod uglom do 20 stepeni. Funkcionalna izvedba i dodatna oprema omogućavaju veoma efikasno košenje na bankinama puteva. Zavisno od radnih uslova kosačica može da radi sa reznim aparatom radnog zahvata 1,05 i 1,30m. Visina košenja podešava se kontinualno, pomoću klizača, u granicama od 3 do 9 cm., a napadni ugao rezanja u granicama od -8 stepena do +8 stepena. Menjač sa jednom brzinom napred i jednom nazad, izvedba sa pužnim prenosnikom i cilindričnim zupčanicima smeštenim u livenom čeličnom kućištu.

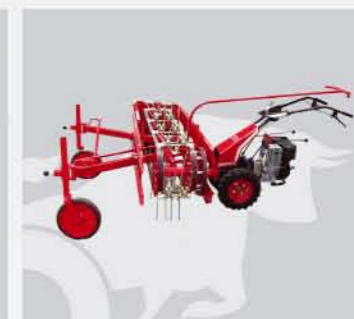

The basic purpose of this motor-mower is mowing variety of herbs such as medicinal herbs, regular herbs or cereals. The most useful usage of this mower is on mountain terrains where other tractor mechanization cannot be use. When mowing on hilly terrains use angle of 20 degree for safety in working. By its special functional design and it's additional equipment, machine wil show great efficiency when mowing on shoulder of road. Depending on working conditions, a cutter bar of 1.05, 1.30m working width can be used. The high of cutting is adjustable by positioning the sliders within the range of 3 to 9cm and having the angle of cutting with cutter bar within the range of -8 to +8 degree. Gearbox is with single transmission from cylindrical gears and in paired with worm gears inside the forged case-box.
